DETAILED ACTION

Election/Restriction

1. Applicant's election with traverse of invention I, species B and single ultimate species (first mode residual heat removal and second mode reactor core isolation cooling) in Paper No. 9 is acknowledged. The traversal is on the ground(s) that inventions are related and that examination of the inventions would not be a serious burden on the examiner.

This is not found persuasive. The examiner in Paper no. 7 clearly set forth how and in what manner the inventions were unrelated. Furthermore the examiner has shown the separate classification within the art.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 7-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 9.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3641

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Hench et al (4,421,716).

Hench discloses a safety monitoring system capable of meeting applicant's claimed inventive concept.

Referring to figure 3 Hench discloses a safety monitoring system for a nuclear reactor power plant comprising: A flat panel display having a pushbutton keyboard. The operator selectively toggling being between modes (i.e., system status display (1-6) - comprising residual heat removal, reactor core isolation cooling, etc.) of operation. Note further that the operator can further monitor plant permissives (7-11) prior to switching modes of operation.

The system of Hench further sets forth a fail safe logic wherein the mode of operation is automatically changed on the display screen without going to a standby mode in the event of a selected plant variable out of limit.

While patent drawings are not drawn to scale, relationships clearly shown in the drawings of a reference patent cannot be disregarded in determining the patentability of claims. See In re Mraz, 59 CCPA 866, 455 F.2d 1069, 173 USPQ 25 (1972).
